

Final Project-Deliverables
GROUP 2: DORMATORY MANAGEMENT SYSTEM
READ ME

A Java-based Dormitory Management System designed to manage
resident repair requests, hall manager assignments, and
maintenance tasks.

Team Members

Frances Rhanian Gatchalian

Mary Grace Gonzales

Rucia Garcia

Stephanie Sarah Cadavos

System Features

- Resident repair request submission
- Repair request tracking
- Hall Manager request management
- Maintenance staff assignment
- Maintenance task updates
- Repair status monitoring
- Database record management

Technologies Used

- Java
- MySQL
- NetBeans
- JDBC

System Workflow

Resident

- Submit Repair Request
- Database
- Hall Manager
- Assign Maintenance Staff
- Maintenance Staff
- Update Repair Status
- Completed

Project Structure

- `Programs/` – Java source code
- `Database/` – SQL database and sample data
- `UML/` – UML diagrams and system architecture
- `Screenshots/` – system screenshots
- `Documentation/` – user manual

How to Run

1. Download or clone this repository.
2. Import the Java project into NetBeans.
3. Create the MySQL database.
4. Run the SQL file in the `Database` folder.
5. Update the database connection settings if necessary.
6. Run the Java application.

Documentation

The complete User Manual is available in the `Documentation` folder.

Screenshots

Screenshots of the system are available in the `Screenshots` folder.
